Loco-Motion

In a short rendition of "I've Been Working On The Railroad," a cubical network of track appears on the screen. This network includes connecting squares of different colors, and one blank square. Each square contains a different shaped section of track.

As the train chugs along, you control its destiny by adjusting the direction of the track.

With the use of a joystick you move the track up, down, right and left, to determine the train's direction. The track the train travels over is distinguished by its bright yellow color.

Speed Control

You also control the speed of the train with the use of a speed button.

Catchin' the Bonus

Points are added as the train travels through each station picking up passengers, and for each block of track it crosses. You must also reach the Bonus Station before the bonus reaches zero or crazy trains may materialize and threaten the safety of your train.

Final Score

The faster the Bonus Station is reached the more bonus points earned (from 1000 to 5000). Clear the track and a new and more complex network of track appears on the screen.
